

Horticulture

Horticulture is the scientific study of garden crops, including fruit, vegetables, and flowers. You can find lots of interesting things in the Horticulture Building at the Fair, including honeybees, giant pumpkins, crop art, Christmas trees, bonsai, and many other home-grown delights.

***How many words can you make using the letters in the word horticulture?
List them below.***

Art activity:

Seed art or crop art has become a Minnesota State Fair tradition. Crop artists glue seeds down to form very detailed pictures. Want to give it a try? Get a piece of cardboard and ask a grown up to help you find some seeds – either in the yard, the pantry, and/or a spice rack. Glue the seeds on the cardboard to form an interesting pattern, word, or picture.
